ABSTRACT

2

3 The invention provides a portable safety handle that
4 temporarily attaches to wood pilings for use in the entering or
5 exiting of docked boats. The safety handle is preferably
6 constructed from plastic having a front surface for engaging a wood
7 piling and back surface that is sized to prevent a persons hand
8 from touching the wood directly and includes a handgrip for support
9 of the person during boat entry and exit. The safety handle is
10 temporarily secured to a wood piling by a pair of straps adapted to
11 extend around a piling.
